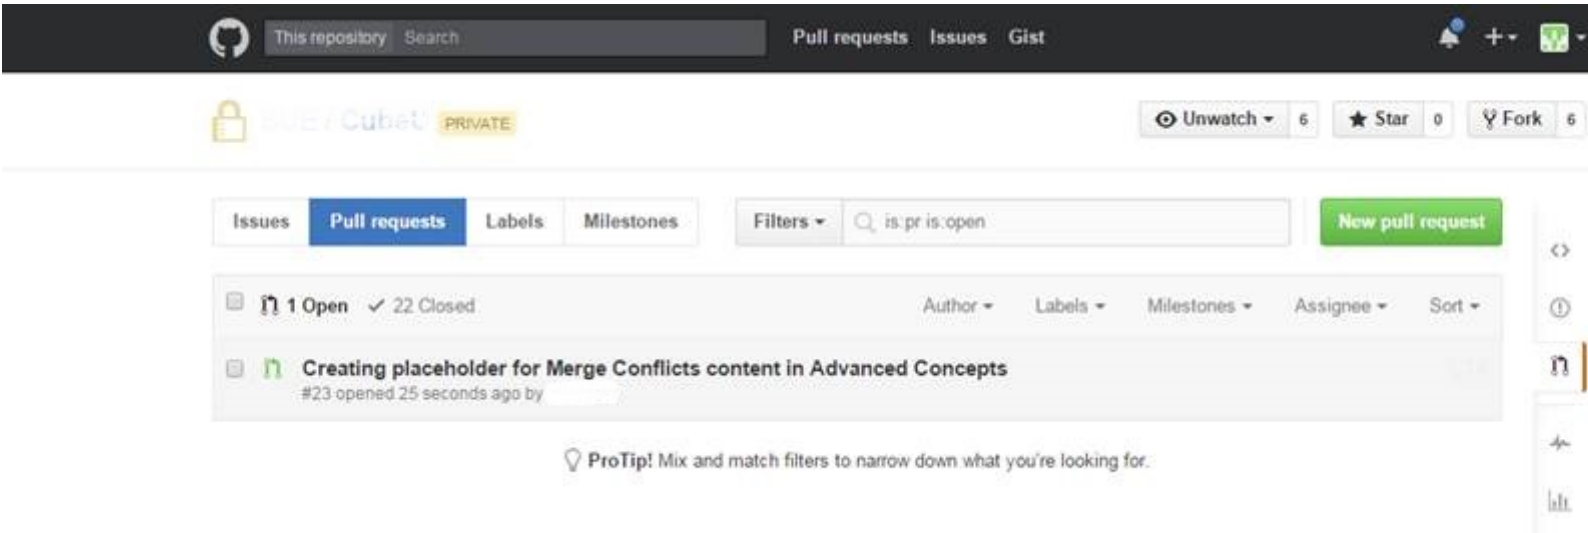
Pull Requests

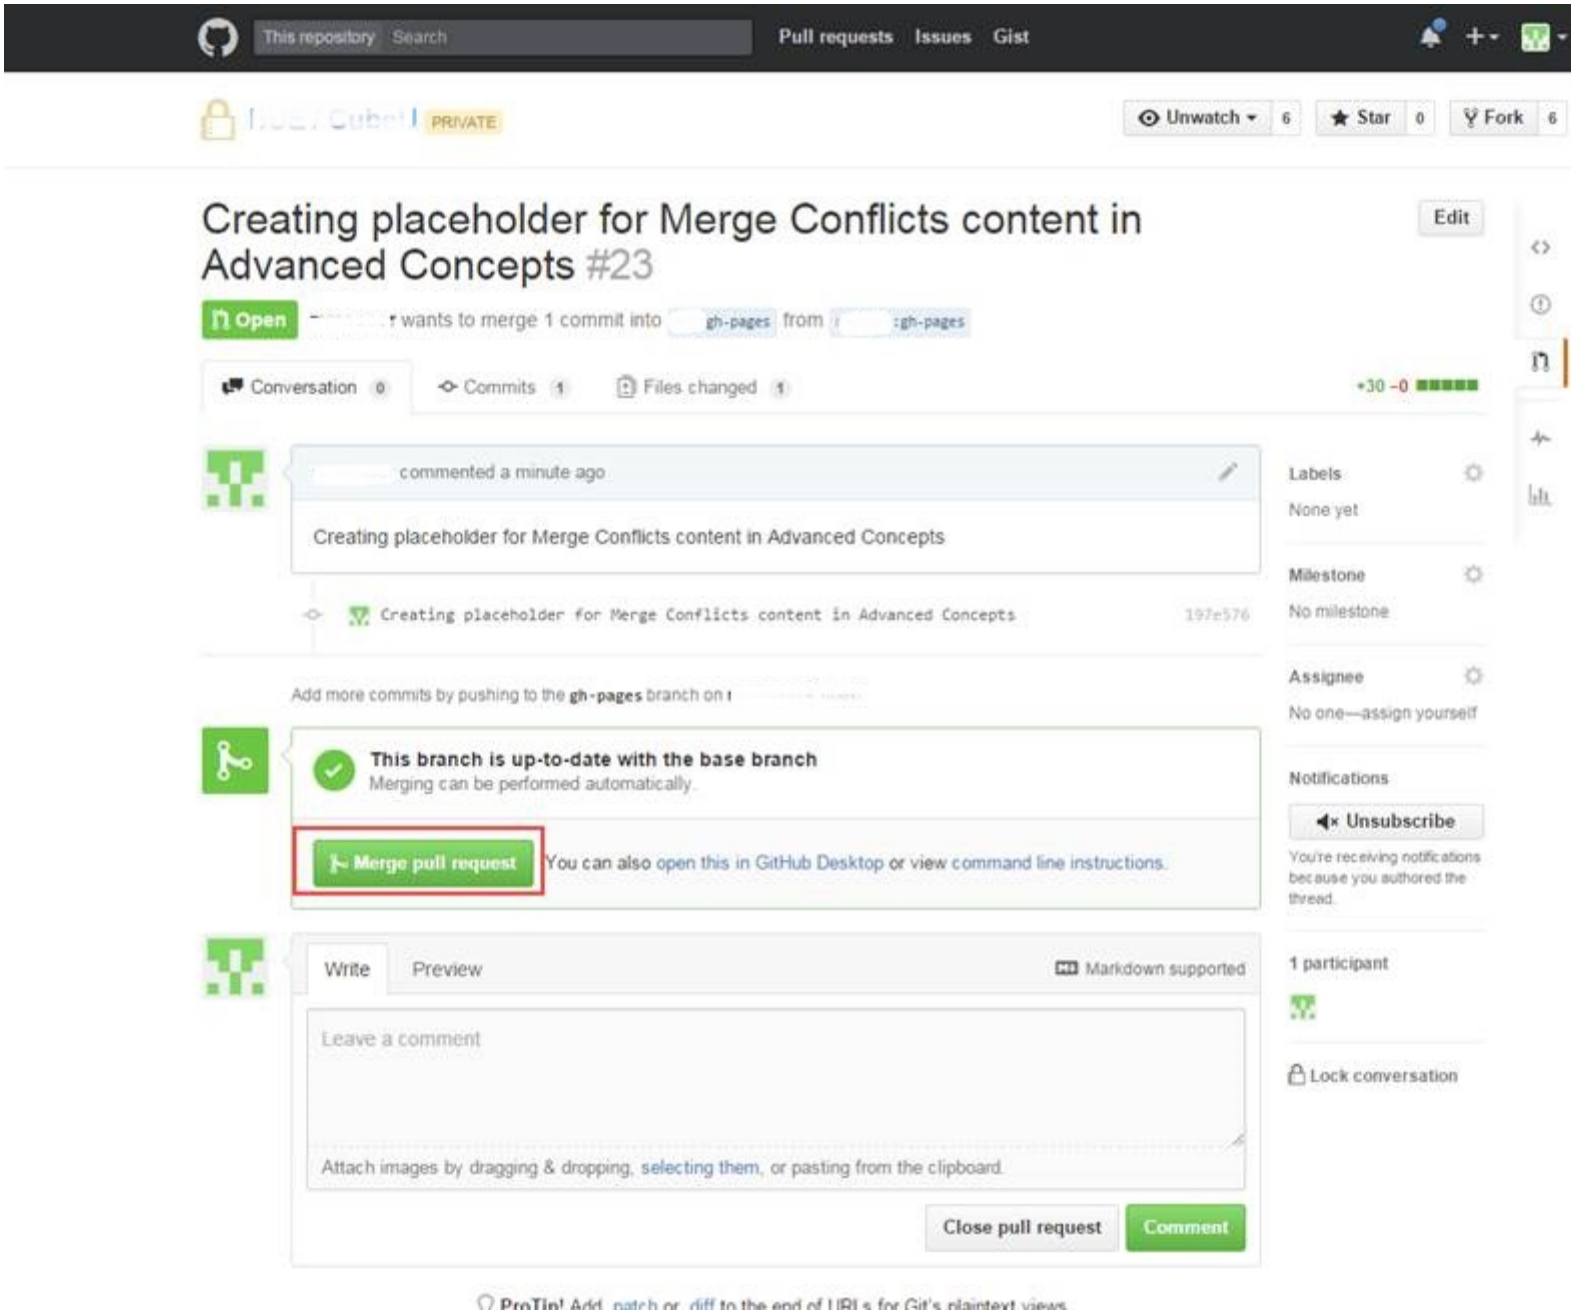
Approving a Pull Request

1. After a Pull Request has been created, navigate to the Pull Request View within the appropriate repository; click on the title of the Pull Request you would like to view

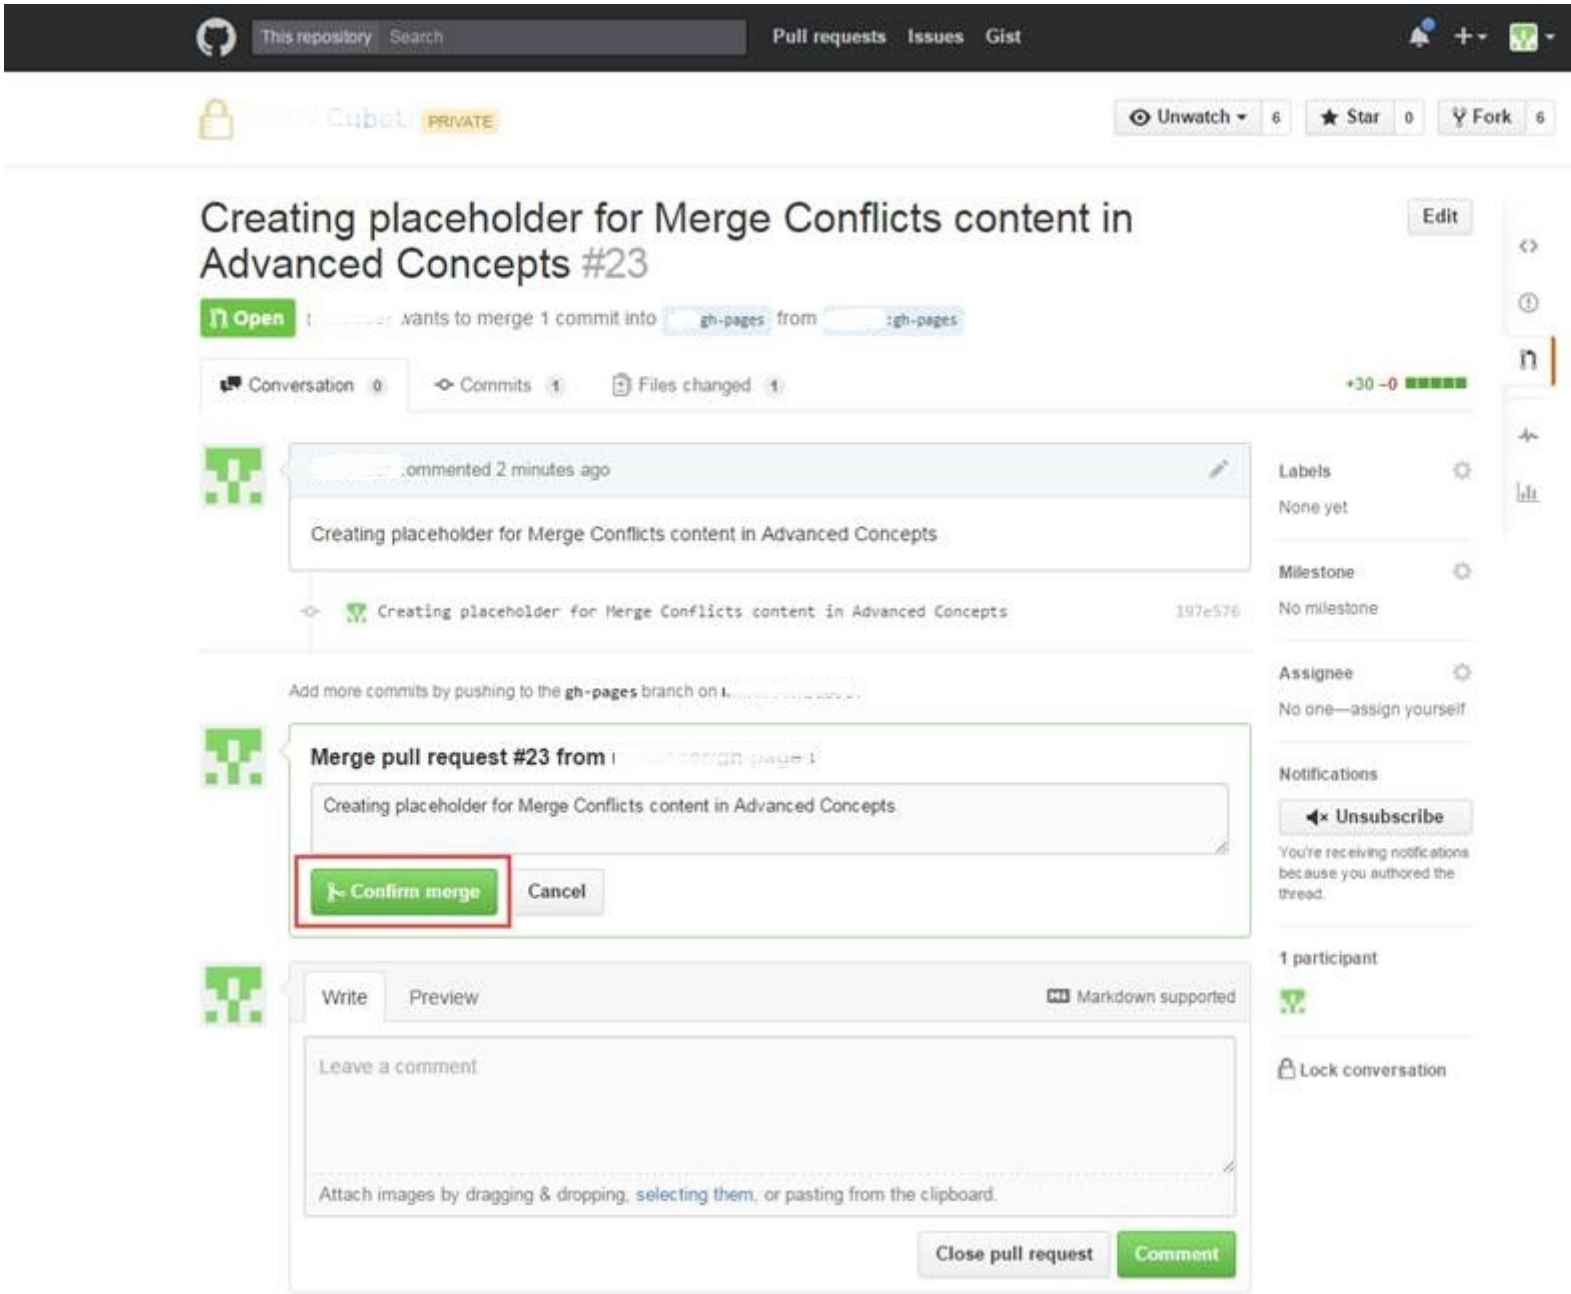


2. If everything looks good and you would like to merge the changes into the BASE repository, click the green **Merge pull request** button

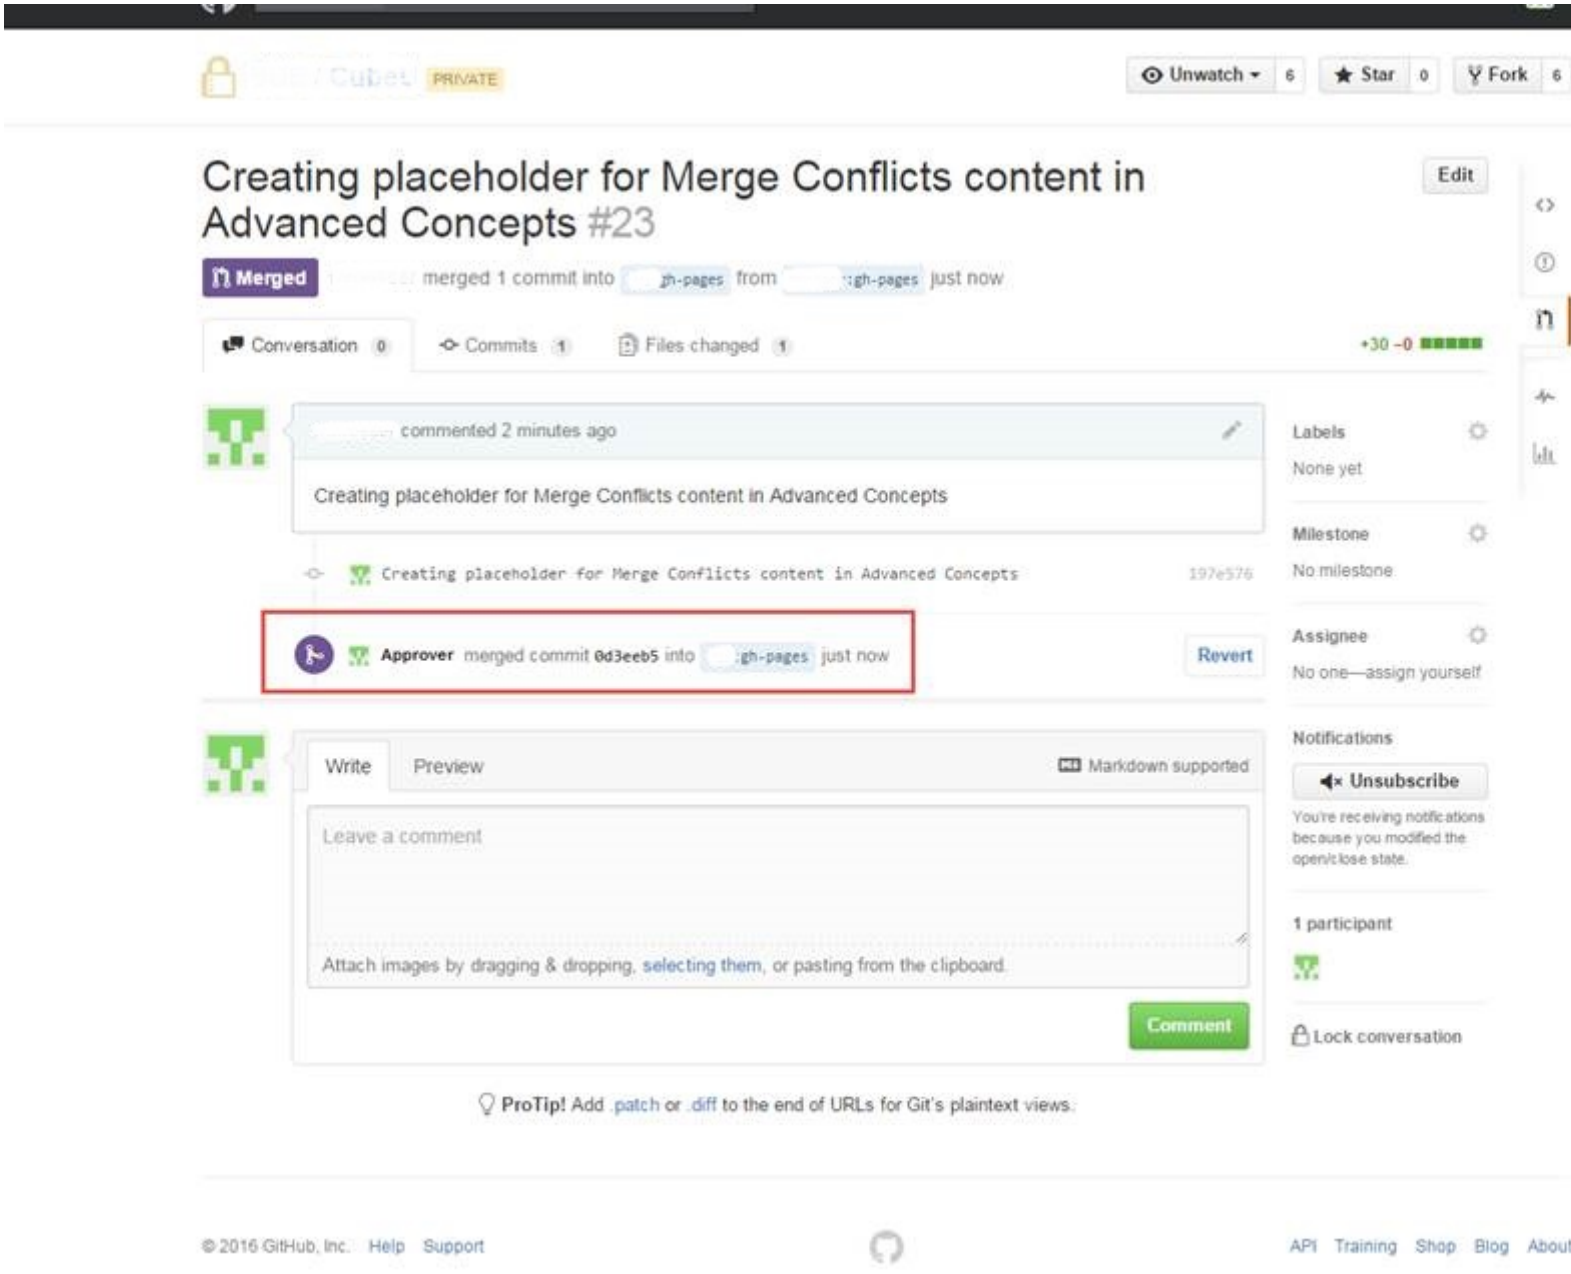
   **Remember, only people with the Approver role will be able to take this action. If you are an Approver, but you are the one that submitted the Pull Request, you should request that another Approver review your changes and complete the merge.



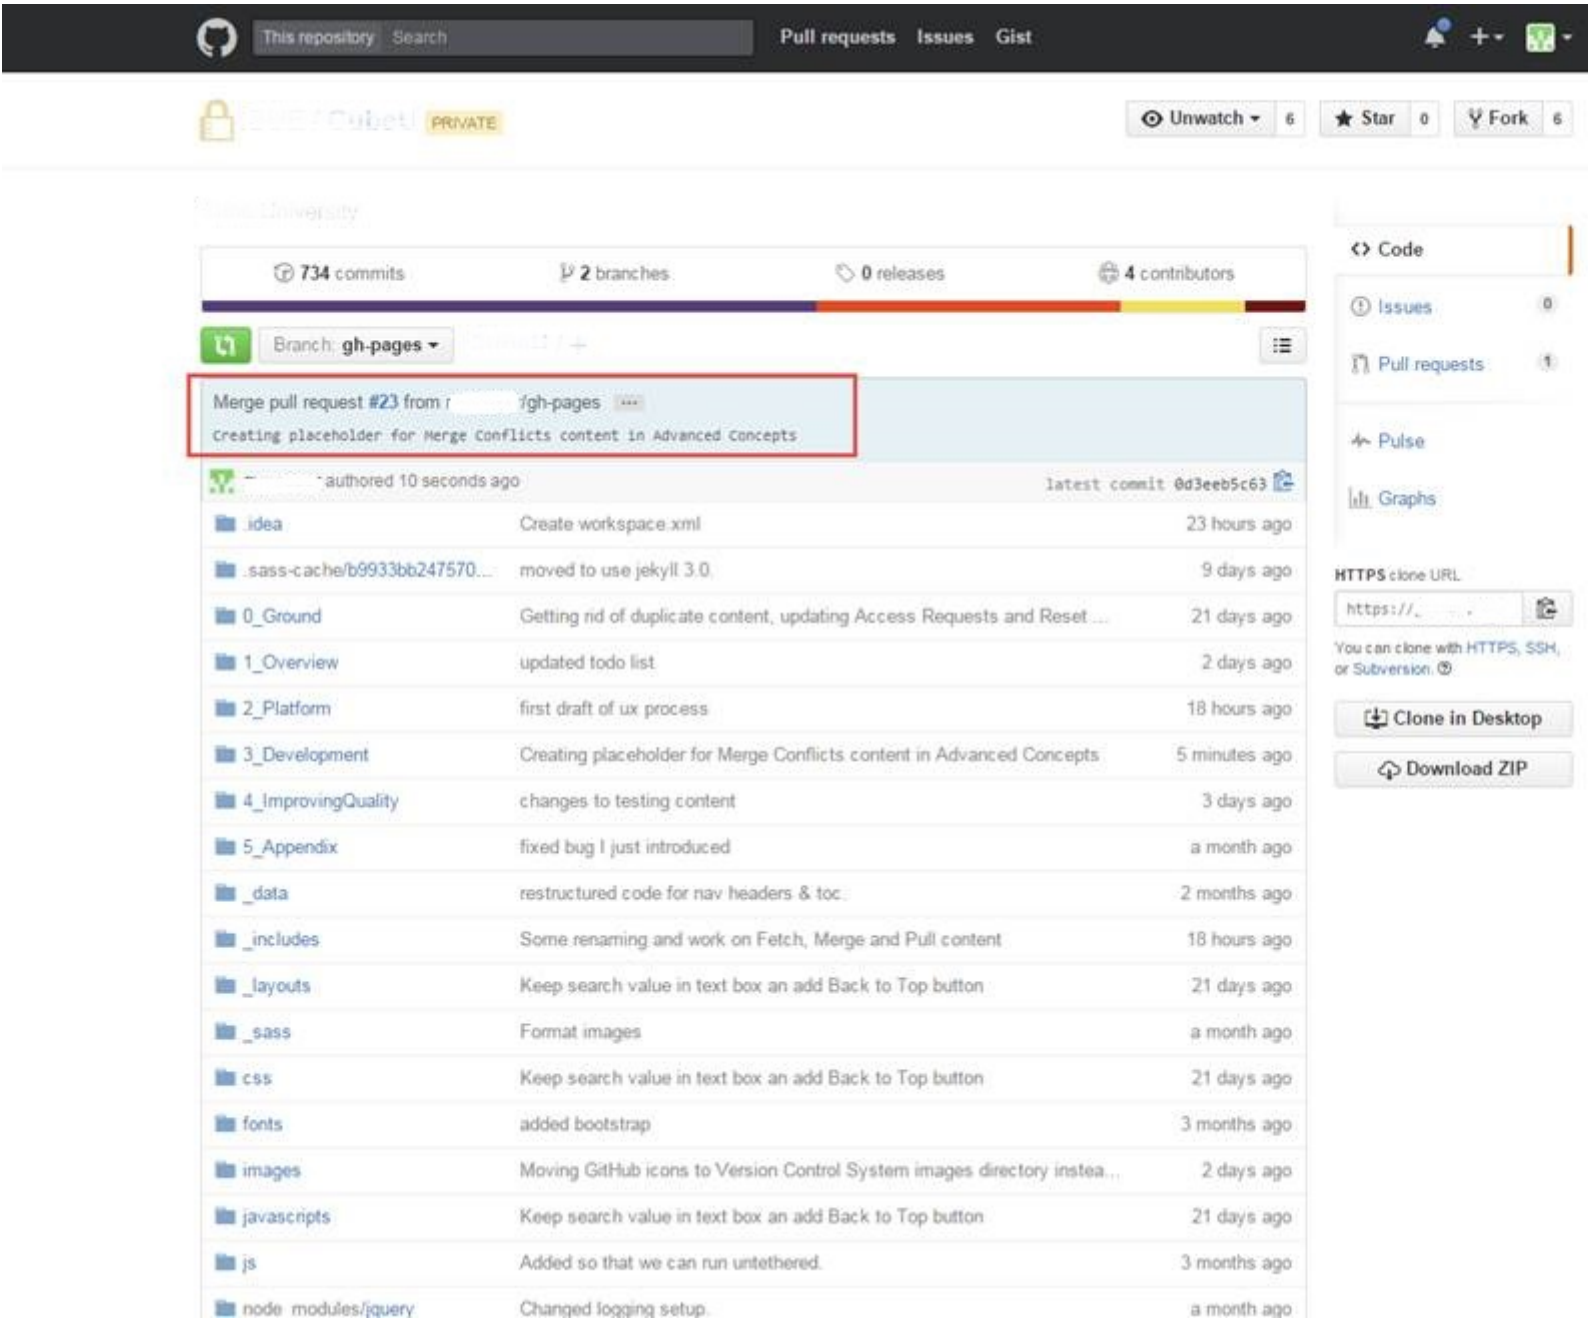
3. The title of the Pull Request will be auto-populated as the merge comment, but you can change it to be more meaningful if you would like; when finished, click the green **Confirm merge** button



4. A note will automatically be generated in the **Conversation** tab noting that the merge took place



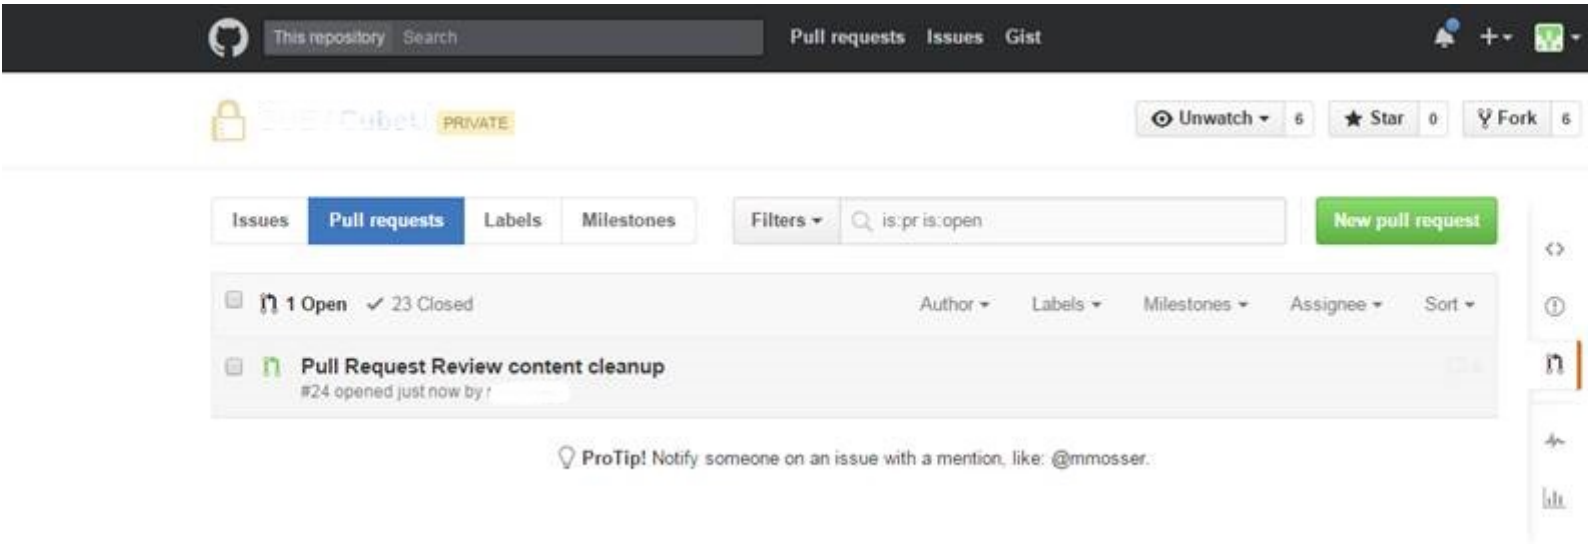
5. In the repository itself, a note will also automatically be generated listing the most recent merge comment



Requesting Changes on a Pull Request

Requesting a change on a Pull Request is as simple as adding a comment, either a general comment or at the line item level. Commenting is covering in the [Pull Request and Review]() section.

1. After a Pull Request has been created, navigate to the Pull Request View within the appropriate repository; click on the title of the Pull Request you would like to view



2. In this example, the Approver is making a line item comment for the requester to change something

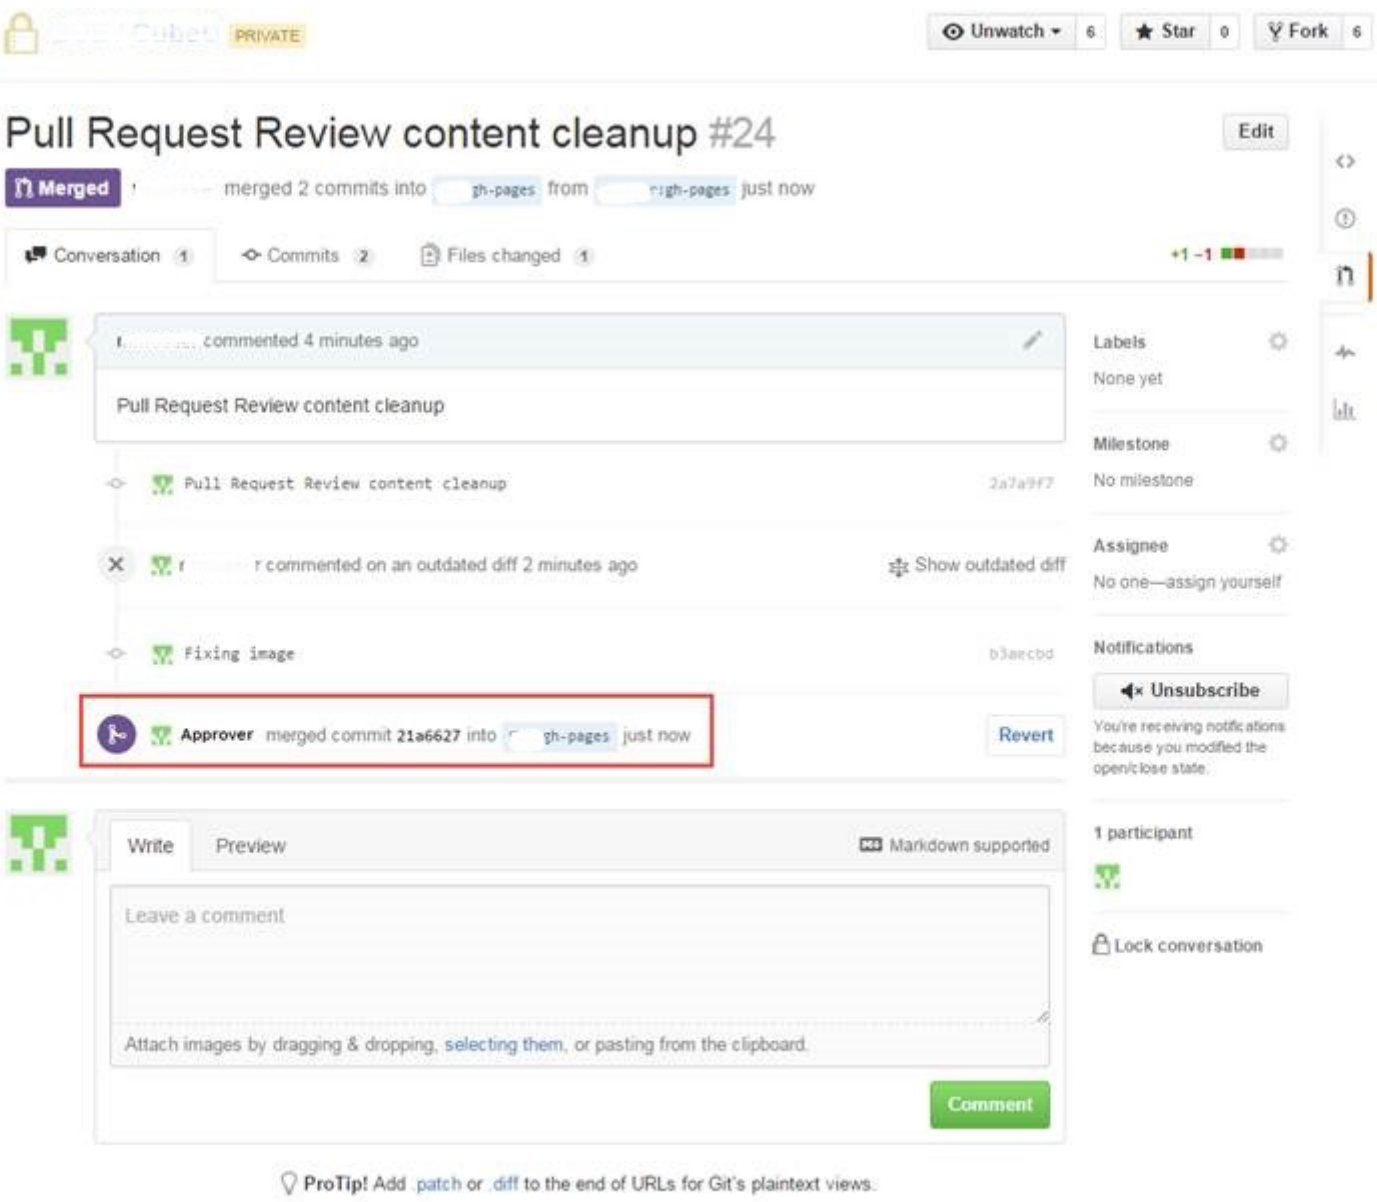
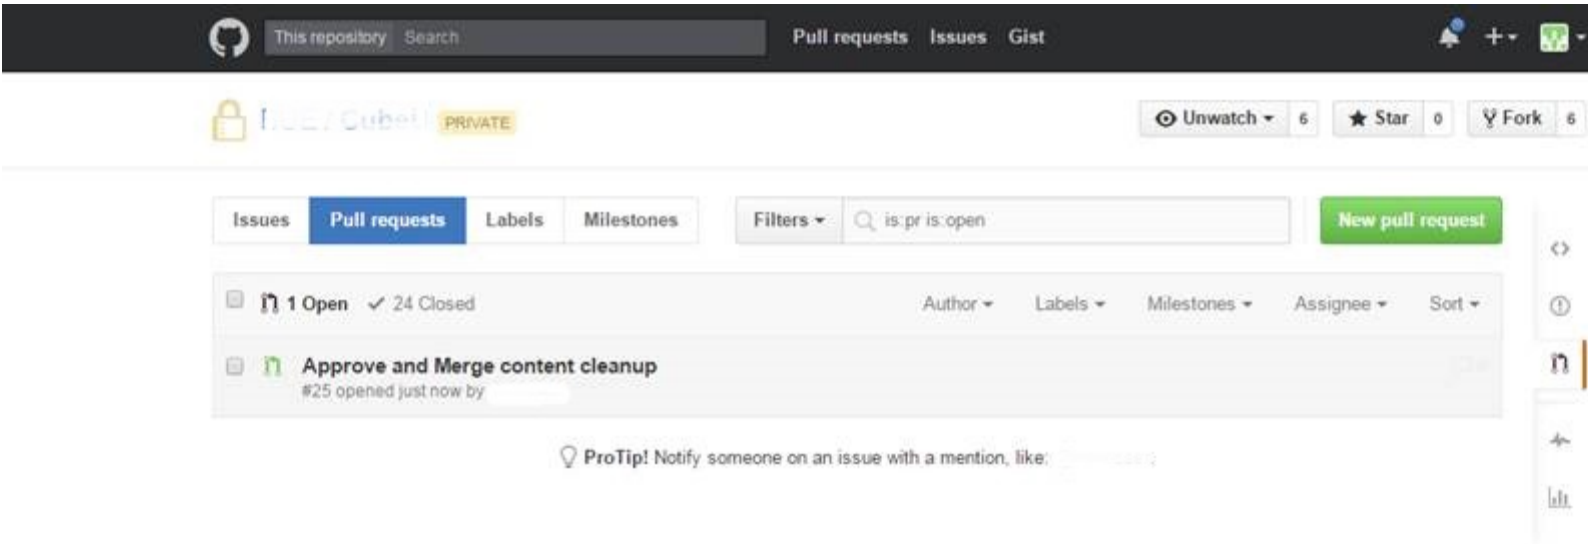
5. From there, the Approver can review the changes again and merge the changes as outlined above

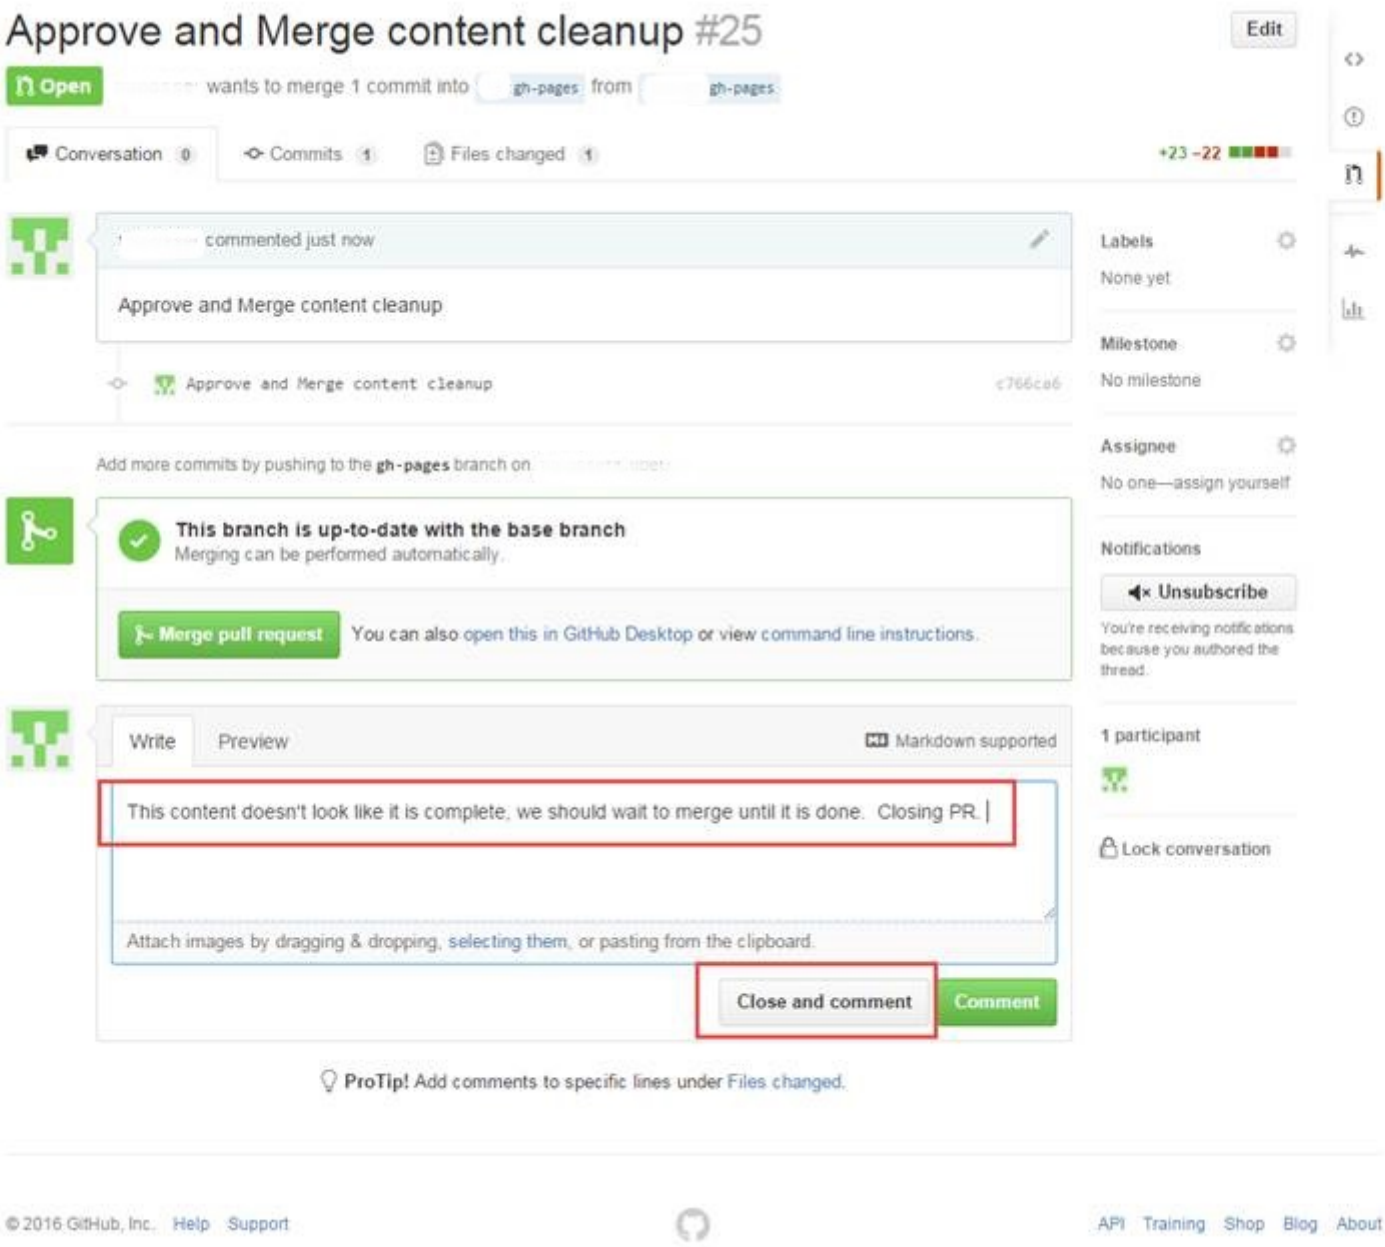


Closing and Reopening a Pull Request

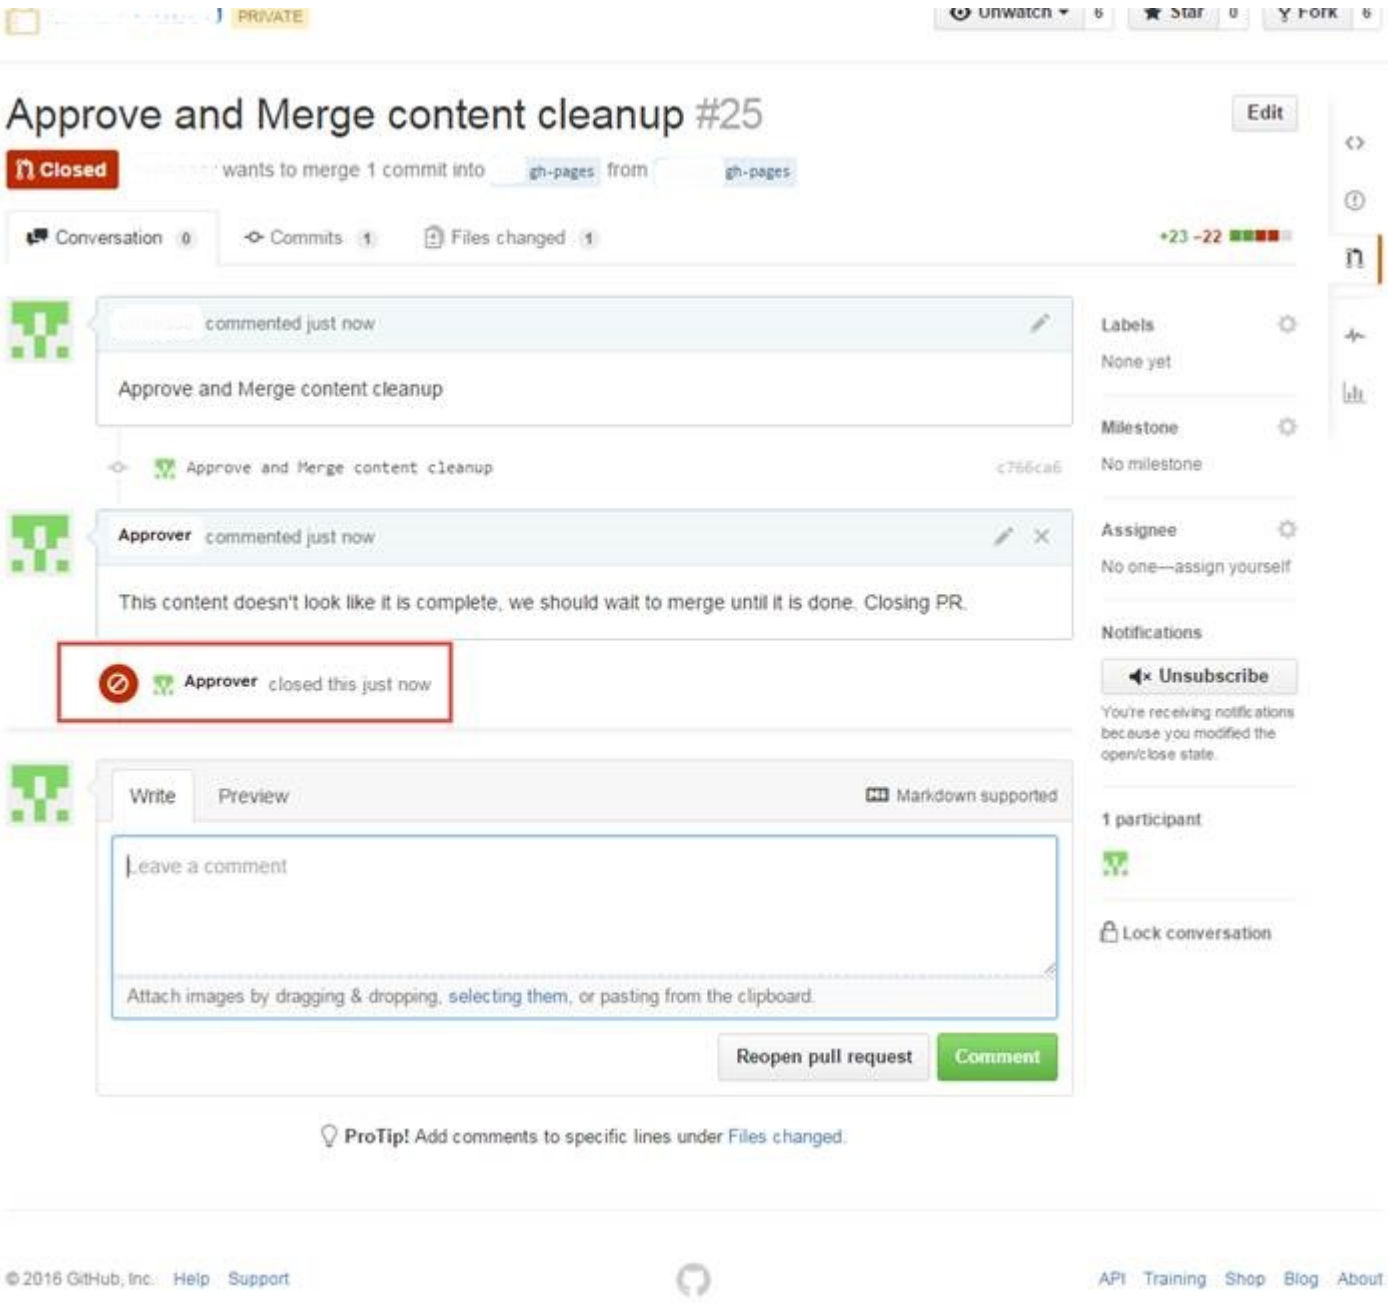
1. After a Pull Request has been created, navigate to the Pull Request View within the appropriate repository; click on the title of the Pull Request you would like to view



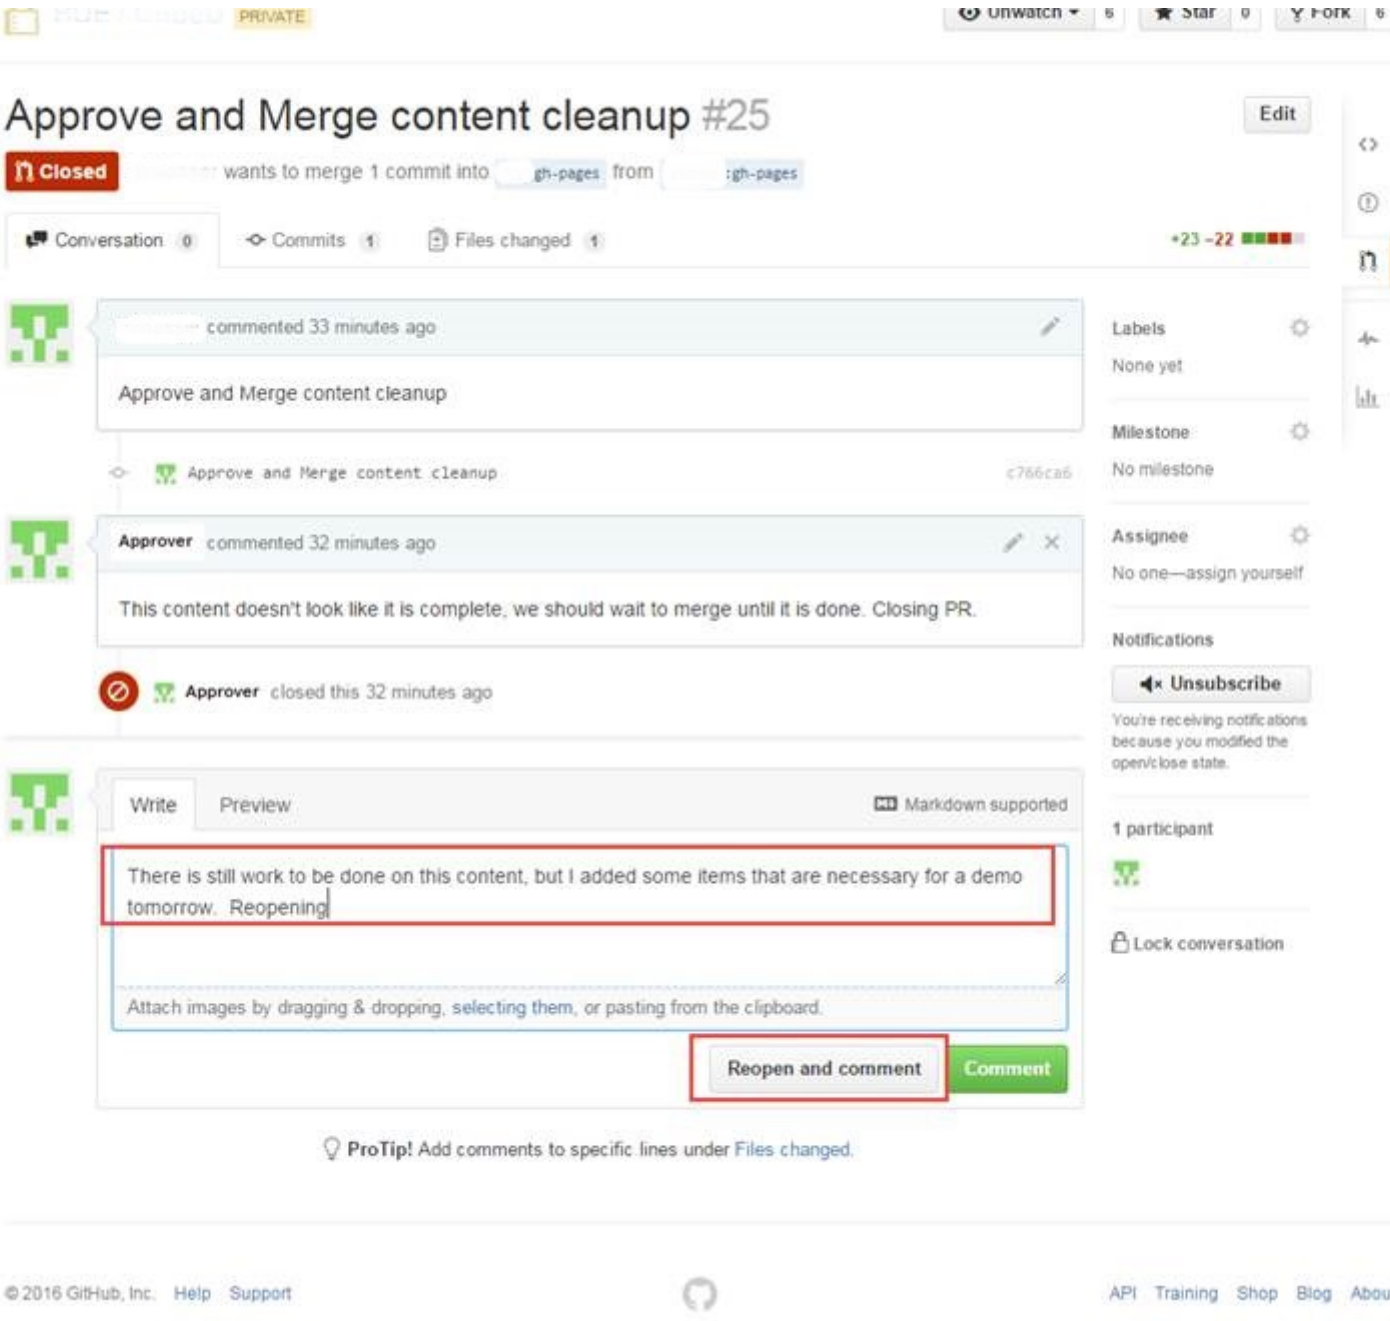
2. In this example, the Approver has reviewed the changes and is rejecting the Pull Request; create a comment explaining the reason for rejection and click the **Close and comment** button



3. The Closure event is automatically recorded in the **Conversation** tab of the request; at this point, no code in any of the repositories has been affected and the process could end at this time. The next time the requestor would like to submit a Pull Request, they would simply create a new one



4. If the requestor has reason to believe that the Pull Request should be opened again, they can create a comment and click **Reopen and comment**



5. The Reopen event is automatically recorded in the **Conversation** tab of the request and the process can continue on in any of the manners as outlined in the processes above

Approver commented 33 minutes ago

This content doesn't look like it is complete, we should wait to merge until it is done. Closing PR.

How long to keep PR Open?

Your PR will remain open until it is deleted. While some people may choose to hold a Pull Request open and continue to push to it, it is recommended that you delete your Pull Request after it is approved and merged to keep things clean.

merged commit e26ef9a into :master from :RA-21686 just now

deleted the RA-21686 branch just now
